EDUCATION

Texas A&M University

B.S., Computer Engineering GPA: 3.5 / 4.0

College Station, TX

Expected May 2028

Relevant Coursework: Data Structures & Algorithms, Linear Algebra, Differential Equations, Digital System Design, Engineering Design

PROJECTS

Aegis AI | Figma, AI/ML Prototyping

2026

Predictive insurance claim denial prevention tool – Ideathon 2026

- Designed a desktop tool simulating payer decision logic to predict claim approval, denial, or underpayment before submission, addressing first-pass denial rates of 10–20%
- Architected a three-stage pipeline – CMS-1500/PDF ingestion, an AI model simulating payer decisions, and an optimization layer generating ranked pre-submission fixes – prototyped in Figma

Amazon Rufus AI Redesign | Figma, UX Research

2026

Decision-support redesign of Amazon's shopping AI assistant

- Led user research identifying low visibility and lack of actionable outcomes as the core gaps limiting Rufus adoption despite high user trust
- Redesigned the end-to-end flow in Figma, turning conversations into shortlists, comparison tables, and ready-to-buy carts embedded at key moments of shopping intent

Barter | React Native, Expo

2026

Peer-to-peer campus trading app for college students

- Researched the physical-goods trading app space to define a product concept centered on trust and proximity among college students
- Built a cross-platform mobile app in React Native and Expo, developed with Claude Code, covering listing creation, browsing/search, and in-app messaging between buyers and sellers

SkinLens | React Native, Expo, Gemini, GPT-4o

2026

AI-powered skin condition analysis app

- Built a mobile app that queries multiple AI models (Gemini, GPT-4o) on the same image, treating each like an independent second opinion, and cross-references their diagnoses to surface a more reliable skin condition assessment
- Designed a minimal, easy-to-use interface for capturing images and reviewing consolidated results

LEADERSHIP & EXPERIENCE

Product Development Practicum

Fall 2025 – Present

Officer, Product@TAMU, Texas A&M

- Lead user research sessions for 3 product concepts: conducted interviews, synthesized insights, and drafted feature proposals in PRD format
- Organize workshops on product thinking and roadmapping for 50+ members; collaborate with engineers and designers to scope and prototype a campus resource discovery app

SAT Tutor

Summer 2026 – Present

Independent

- Tutor multiple students in twice-weekly sessions, running diagnostics and developing curriculum frameworks aligned to the Digital SAT's adaptive module structure and pacing

Advanced Robotics Project | Python, Embedded Systems

Fall 2025 – Present

Turtle Robotics (Advanced Track), Texas A&M

- Selected for the advanced project track; develop autonomous behaviors for a custom robot platform in Python using sensor feedback loops

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript/TypeScript, SQL

Frameworks & Tools: React Native, Expo, Pandas, NetworkX, Git/GitHub, Figma, Excel, Claude Code

Product: User research, PRDs, roadmapping, prototyping

CERTIFICATIONS & LANGUAGES

Certifications: AWS Certified AI Practitioner (In Progress), Deep Learning Specialization – DeepLearning.AI (In Progress)

Languages: English (Fluent), Spanish, Hindi, Gujarati (Conversational)
